THE PHOTOGRAPHS
The photographs that are from cities other than Redmond are examples of successful public projects.
They are meant to inspire a way of thinking about future possibilities.
In spring, 2015, the City of Redmond initiated the development of a Public Art Master Plan. The policies and strategies recommended in this plan will be incorporated in the Parks, Arts, Recreation, Culture and Conservation Plan Update (PARCC) to cover the period of 2016 to 2030.

The consultant team of Sollod Studio LLC and C/Law Studio were retained to work with staff and the community to articulate this vision and to provide recommendations for implementation. Over a period of six months, the team undertook a process of inquiry and discovery, meeting with multiple city departmental representatives, elected officials, community members and the Redmond Arts and Culture Commission, examined other public art models, and developed a response tailored specifically to the unique qualities and characteristics of Redmond.

The images included in this report are for illustration purposes and to provide inspiration.

EXECUTIVE SUMMARY

OVERVIEW

This public art plan articulates an ambitious agenda for art integration and a clear vision of Redmond as a dynamic city where art is intrinsic to its vibrancy and character. Nurturing an ever-changing mosaic of contemporary cultural expression, the City will use art to link people to their city and to each other, to create a truly sustainable, soulful and imaginative community. Known as a national center for technological invention, Redmond embraces the idea that innovation in the arts and creative expressions will nurture and sustain community. The plan articulates values, goals, and qualities that guide the achievement of this vision and mission.

This ambitious direction was the result of a several years of pilot projects that tested the boundaries of public art in Redmond, representing a shift from the path charted by the original Percent for Art Ordinance.

The resulting public art plan puts forth an ambitious agenda for art integration and a clear vision of Redmond as a dynamic city where art is intrinsic to its vibrancy and character. Nurturing an ever-changing mosaic of contemporary cultural expression, the City will use art to link people to their city and to each other, to create a truly sustainable, soulful and imaginative community. Known as a national center for technological invention, Redmond embraces the idea that innovation in the arts and creative expressions will nurture and sustain community. The plan articulates values, goals, and qualities that guide the achievement of this vision and mission. It coalesces around four overarching themes for artistic exploration:

• “Intertwining systems” relating to sustainability in the built and natural environments
• “Mosaic hybrid” recognizing the rich diversity of cultural expressions of its residents
• “Intellectual playground” building upon its Innovation Partnership Zone status and the many creative start-ups that call Redmond home
• “Power of place” referencing the importance of intentional development of places for public gathering, whether streetscapes or parks or civic facilities.

FINDINGS

Background

In 1991, Redmond adopted a Public Art Ordinance, setting the stage for acquiring art for the public realm. The Ordinance was narrowly drawn, restricting the type of art that could be acquired and the type of capital projects that were eligible for inclusion. Over the next 20 years, the number of works in the City’s collection grew to include primarily small-scale sculpture and two-dimensional works that grace City Hall and various public buildings. Over the last few years, with greater ambition for the role that art could play to enliven the City, Redmond shifted its approach, embracing active art engagement and contemporary art practice that transformed civic spaces and engaged the community. The City increasingly involved artists in the planning and design of critical pieces of infrastructure and community amenities. It engaged an artist-in-residence who created performative works in public spaces that drew the community together in creative gatherings.

Above: Jesus Raphael Soto, Penetrable, LACMA, Los Angeles, CA
Outreach and Interviews

In spring, 2015, the City commissioned Sollod Studio and C/Law Studio to work with the community and with staff to articulate a new vision and to provide recommendations for implementation. The public art plan will become a part of the City’s PARCC (Parks, Arts, Recreation, Culture and Conservation) Plan, covering the period of 2016-2030. Over a period of six months, the team undertook a process of inquiry and discovery, meeting with multiple city departmental representatives, elected officials, community members and the Redmond Arts Commission, examined other public art models, and developed a response tailored specifically to the unique qualities and characteristics of Redmond.

The outreach efforts confirmed a city with an appetite for art and culture that is adventurous, soulful and inclusive. In a citywide survey conducted as part of the PARCC Plan, 75% of respondents expressed a belief that public art is important and should continue to be funded. The survey also showed that many residents go outside the City for cultural activities and would like the opportunity to have more available locally. Interviews with City leadership revealed a desire for the cultural dimension to be woven throughout and for the arts and culture to be supported and elevated. Given the evolving state of art and culture in Redmond, it became clear that the City is in a unique position to play a pivotal, leadership role.

FRAMEWORK

Vision, Mission, Goals

Seeing the efforts of the last several years affirmed through the research process, Redmond decided to frame a more intentional approach to public art and to create a public art plan in step with the rapid growth of its two urban centers and dramatic changes in population anticipated in the next several decades. The Plan’s vision is for Redmond to be a dynamic city where art is intrinsic to its vibrancy and character. This vision will be achieved through weaving art through the physical and social fabric of the city. The Plan articulates several goals that include promoting a walkable culture in which people are engaged in a sweet relationship with the City. Goals also include: creating an exceptional public realm that distinguishes Redmond in the region as a place of innovation and creative energy; expressing natural systems and infrastructure through artworks that promote experiential understanding; and, using art to help create 18 hour/day urban centers. Another goal is to inspire and engage Redmond’s increasingly diverse citizenry, strengthening their sense of connection and community. To ensure this future success, the Plan describes an implementation strategy designed expressly for its vision and needs.

Implementation Strategies

The Plan describes a variety of commissioning strategies referred to as “platforms” that will result in a dynamic and ever-changing environment. These strategies recognize that in addition to civic buildings, the right-of-way, parks and trails are key elements of the public realm and places where artists’ work and thinking can have a positive and substantial influence. These platforms range from “signature works”, defined not by scale but by impact, to highly integrated works resulting from artists serving on collaborative design teams. These works may address the pedestrian experience as well as explore the intersection of art and technology. In addition to permanent works, the Plan recommends a robust program of temporary works involving artists-in-residence, engaging social practice projects, and ephemeral/temporary works based in the city and its natural landscape. The Plan provides a detailed list of projects and art opportunities supported descriptive “platforms”, scale, budget range, location, and purpose. These are grouped in timeframes of near, medium and long term, corresponding to the PARCC Plan.

REDMOND @ 2030

The following three narratives describe how this Art Plan could impact the City incrementally at benchmark time periods. They imagine the progressive interweaving of the art of placemaking, the promoting of artists thinking and creative works, and the enlivening of Redmond’s quality of life. The descriptions illustrate how the new approach to public art – both programmatic and in generating engaging

Above: Lilenthal and Zamora, *All Rise*, Seattle, WA
creative artworks – creates a sense of destination through establishing vibrant urban centers that entice the community to gather and support businesses while building community.

By 2022, the Downtown Park is completed with the central feature being an artist-designed pavilion. It is enlivened by a plethora of art activities and ephemeral projects. Phase Two art projects for the Central Connector have been implemented. The City has begun exploring how art can be incorporated into the Innovation Partnership Zone. City parks and trails outside downtown host temporary and ephemeral projects. The LACE criteria has been tested, refined and used to identify other important project opportunities and a Civic-Artist-in-Residence has worked collaboratively with City departments. Early involvement of City staff with Sound Transit has laid the groundwork for art in Overlake light rail. The community is noticing that the look and feel of Redmond is changing as artists, their artworks and creative thinking are increasingly experienced in the public realm. The City’s leadership role in promoting art and culture has had an impact in the breadth and quality of arts projects and it has become central to the quality of life.

By 2026, considerable development focus has shifted to Overlake. The light rail station, pedestrian bridge and public plaza at Overlake have benefitted from artist involvement. Planning for the Downtown and SE light rail stations is underway. Artists are included on the design teams for Overlake Village Park, Urban Pathway, pedestrian nodes and the 152nd Gateway. Artists’ creative input is infusing the street grid, parks and intersections with a fine-grained aesthetic that is giving a lively, genuine character to the neighborhoods. Redmond is becoming known as a place where a wide variety of lively, eccentric art activity, as well as explorations in art and technology draw the community. The local workforce and those farther afield routinely visit Redmond to experience this rich artistic environment. Regional artists are increasing looking to Redmond as an opportunity for experimentation and exploration.

By 2030, the breadth of how Redmond is known is dramatically expanded. Now, perceived as much as an inspired art town as a center for technological innovation, the City is recognized for its exceptionally distinctive public art program. City departments recognize art and artists’ thinking as essential elements to a exceptional public infrastructure. The private sector is nputting a stake in the ground for art integration, recognizing that it makes their projects distinctive and engaging for the public. The arts are now imbued city-wide. The SE Redmond light rail station effectively links the City to the larger Puget Sound region making it easier for visitors and residents to take advantage of the rich diversity of cultural offerings, coupled with the lively environment that includes good food and a multitude of local businesses and varied types of urban and natural places to explore.

**LACE**

“Leading with Art and Cultural Engagement” (LACE) is the overarching philosophy and implementation strategy of the Redmond Public Art Plan. It embodies Redmond’s aspiration to be known as much as an arts town as a center for technological innovation. LACE grew out of the planning process that aimed to ensure appropriate funding for meaningful art integration in civic projects that would have the most significant impact in the public realm and for temporary and ephemeral projects that would enliven and enrich the community with an ever-changing panoply of engagement. It was also conceived as an approach to fostering interdepartmental cooperation and “arts literacy” within the City itself. Eventually, LACE became the moniker through with civic leadership in the arts could be demonstrated and embraced by the community.

To ensure art integration in important capital projects, the plan recommends the adoption of LACE (Leading with Art and Cultural Expression), an interdepartmental evaluation system that involves key staff in identifying and prioritizing projects. LACE is a method of assessing the potential of a particular capital project as a fertile opportunity to advance the City’s vision for art and quality of life. The LACE criteria would be used when the Capital Investment Strategy
Team, along with the Arts Administrator/coordinator, meets biennially, and to facilitate informed discussion and promote interdepartmental coordination and cooperation. Staff would be empowered to evaluate overall projects to determine what the most appropriate funding allocation would be.

**ALIGNMENT RECOMMENDATIONS**

Essential to the implementation of this Public Art Plan is amending the current Ordinance to expand project eligibility, revise the way Percent for Art is calculated, and increase the allocation above one percent. These changes will bring the Ordinance in line with the implementation of LACE and the Plan’s vision and mission.

**Taken together and boldly acted on, the outcome of implementing this public art master plan will be a city where art and creative energy is woven throughout; where the role of arts and culture is constantly explored, supported and elevated; and where the City’s leadership in the arts makes a striking difference in the quality of life of its residents. It follows that the community will highly value the place they live**
A DESIRE FOR ART WOVEN THROUGHOUT

Jack Mackie, Broadway Dance Steps, Seattle, WA
FINDINGS

The research process included an analysis of the City’s original public art program defined by the Ordinance and the more recent shift in the program that is more attuned placemaking and community building. Interviews with community members, City staff and City leaders revealed a desire for a new approach to the public art program that is increasingly responsive to the growing complexity and diversity of Redmond’s community. Choosing from among many potential threads, a strategy emerged to nurture a character defined by diverse cultural expressions and Redmond’s technological innovation. The intention is for the program to continually evolve and to be responsive to the energetic community of Redmond.

ANALYSIS OF CURRENT COLLECTION

The recent changes in the kind of public artwork and cultural expressions that are unfolding in Redmond have implications for the direction of the program and even how a public art “collection” is defined.

Currently, Redmond’s public art collection consists of 110 works. Generally, the collection is a fairly standard mix of two and three-dimensional artworks that are spread between civic spaces such as City Hall and the Civic Campus, Old Redmond Schoolhouse Community Center, the Public Safety Building and fire stations; and outdoor spaces such as the Connector, various parks, and the Sammamish Trail. The majority of the collection is sited in relation to City Hall and the surrounding campus. The collection is split approximately evenly between outdoor and indoor artworks of various scales of 3-D pieces and artwork integrated into architecture, and 2-D indoor pieces in a variety of media.

The overall character of the collection is a balance between abstract and representational works, with a range of references although nature themes are more prevalent. While the quality of the workmanship is high, the conceptual character and quality is relatively conservative and quiet. The collection might be seen as “pleasant,” and by and large lacking in the kind of conceptual vigor that aligns with how Redmond sees itself currently and in its future. Consequently, the artworks are not having the depth of impact on Redmond’s sense of itself that a collection could and should have.

The exceptions include the Moving Arts Center and the three recent artworks associated with the Connector: The Erratic, Signals and Sky Painting. These are bold moves in scale and concept and greatly impact the perception, sense of place, and use of the downtown portion of the connector. The artworks planned for the Connector extension will branch off into more ephemeral, participatory artwork that is in direct relationship to trail users. The breadth of the artwork for the downtown park is yet to be realized.

It is clear there is change afoot in the kind of public artwork being conceived and placed in Redmond’s public realm as the city’s attention is turning to the projects that are redefining the heart of Redmond’s center.

INTERVIEWS AND OUTREACH

There is an expressed desire to create an overall vital, beautiful integration of physical and cultural/social environments that ultimately defines Redmond as a unique city with a “soul”.

Interviews were conducted with fifteen people including community stakeholders, City staff, elective officials, business representatives and the Redmond Arts and Culture Commission. See Appendix ___ for a list of interviewees. Work was also coordinated with the cultural facility planning consultant.
The staff and consultant team participated in the Arts & Culture Stakeholder Group meeting and the Parks Planning Open Houses as part of the PARCC planning process.

Everyone expressed a strong desire to create a dynamic community. There is a well-articulated sense of vision, understanding, and unified direction. There is an overwhelming desire to create a vital, beautiful integration of physical and cultural/social environments that ultimately defines Redmond as a unique city with a “soul”.

In particular, the downtown core is seen as a key focus. It is understood to be perhaps the part of the City with the strongest potential to gather people together and strengthen the sense of community. To achieve this end, the city must assure that it is re-developed in a way that provides a memorable, meaningful balance of built and natural open spaces with cultural threads woven throughout. This mix is necessary to support a healthy, vital community for the current and future demographic mix.

Redmond’s increasingly culturally diverse population is sited as a strength, demonstrated by the rich cultural traditions and festivals. To some degree, these ethnic art events bring together people from many cultures. There is a desire to foster a greater degree of cross-over and collaboration among diverse groups. Engaging artists to explore contemporary culturally specific artistic expression is seen as a way to bring the community together and forge a unique sense of social and cultural equity in Redmond.

PEOPLE TALKED ABOUT:

- Embracing art and creative cultural expression as core values of the city;
- Advocating for inclusion of the arts in the public and private sector;
- Incentivizing design excellence in private development to achieve the highest quality projects;
- Including funding for art as part of the City infrastructure and capital projects as integral to good city planning and services.
- Involving artists as members of strong design and planning teams to capitalize on their influence on design and potential to infuse projects with more cost effective and expansive art ideas;
- Looking for diverse strategies to support and fund arts within public projects;
- Positioning the city in a leadership role by planning and completing projects that model for citizens and developers the desired outcomes of culturally rich, well-designed places for people;
- Remembering that beauty and good design have a big part to play in the health, vitality and sustainability of Redmond’s community;
- Creating walk-able streets with linked, legible, interesting places;
- Layering cultural expressions from small to large scale so there is an blend throughout the public right of way, streets and public places;
- Using exciting city-sponsored performances and festivals to bring locals and non-locals together to bring about more types of cultural activity
- Supporting a collaborative spirit between departments.

Common Threads

- The cultural dimension should be woven in and throughout the city.
- The City should take a leadership role in supporting and promoting art.
- The private sector should be a partner in advancing the arts.
PARKS PUBLIC ART SURVEY RESULTS

The City conducted a statistically valid ABS survey administered online and via telephone in spring 2015. The surveys included an array of questions related to the arts.

The results of the survey show that the respondents feel strongly that the arts are a significant contributor to the quality of life in Redmond. Seventy-five percent of respondents believe that public art is important and should continue to be fully funded. But importantly, the results also show that many people go outside the City for their cultural activities. A clear majority stated a desire for more local cultural programming. In particular, they would like more activity in downtown Redmond. Currently, Marymoor Park is the location people cited as the place they associate with cultural activity, if they attend local events. Even though the respondents’ primary focus was on cultural events such as festivals, films, etc., it seems clear that if the City offers a broader spectrum of more diverse cultural activities, the community will come.

THE PUBLIC ART ORDINANCE NEEDS RETOOING

The research process has confirmed that the current Public Art Ordinance no longer meets the City’s needs and should be revised to match the new programmatic vision.

The Ordinance significantly limits the types of capital project eligible for Percent for Art. Furthermore, it has been treated as a “deduct” from capital project budgets rather than an addition, resulting in some departments being reluctant to participate in the program because they feel that it takes away resources for necessary features of a capital project. This may mean that some projects that could well benefit from the inclusion of art do not. The Percent for Art is treated more often as “ceiling” rather than a “floor;” consequently, the funds generated by an individual project are often not enough to be meaningful. Because the Percent is not associated with planning preceding CIP development, the funds sometimes come too late for effective art inclusion.

The Arts Commission state that is not always fully informed of upcoming capital projects, resulting in missed opportunities.

There is the need to refine the approach to funding public art to ensure there is a formal mechanism and adopted policy that ensures allocation of funds for public art and that it not be voluntary.

The consultants heard support for developing policy that results in assessing projects at the beginning of planning to ensure that goals and budgeting for art is included at an appropriate amount. Recommendations for changes to the ordinance are included in this report.

OUTSTANDING TOPICS FOR FUTURE DISCUSSION

A critical question is how downtown Redmond will work together with the major re-development of the Overlake area. Clearly, Overlake will be an entirely new neighborhood with a different feel than the existing downtown and residential neighborhoods of Redmond. Overlake, Downtown and SE will complement one another to cross-fertilize and energize each other. Another issue is how to ensure that transit oriented development in Overlake, Downtown and Southeast includes a robust art and cultural component will be necessary to promote vitality and livability.

Finally, there is considerable interest in engaging the private sector in supporting a dynamic built environment that incorporates art as an integral part of the city’s fabric.
RECOMMENDATIONS

These recommendations grew out of the research process and are embodied in the Art Plan’s vision, mission and programmatic direction. They are reflected in the proposed program approach and are aligned with Redmond now and into the future.

• Revise the Public Art Ordinance to make it a more effective and expansive policy tool.
• Develop an approach to public art that is synergistic, energetic and embedded.
• Weave art throughout City departments, facilities and functions by incorporating it into the planning and design of the built and social/cultural environment.
• Redefine “visual art” to be expansive and encompass a broad conceptual framework.
• Establish an artist-in-residence program to energize the community, engage with City staff, and foster inter-cultural dialogue.
• Make artists’ work and thinking an integral part of the design of the built and social/cultural environment.
• Adopt an integrated approach to creative place-making, including integrated art, permanent site specific works, temporary works and event-based activities. Use the arts as an essential ingredient in civic activation.
• Include artists as design team members for transportation, infrastructure, parks and trail projects as well as civic buildings.
• Integrate art into the City’s Capital Investment Strategy by analyzing all capital projects for their potential for art integration in the urban fabric and place-making.
• Review and prioritize implementation of recommendations of the Central Connector, Downtown Art Master Plan and Downtown Park Master Plan to result in a cohesive set of projects that reinforce one another and create a dynamic city center.
• Develop a bold vision for art through an Art Master Plan for Overlake Village.
• Work with Sound Transit on both artist selection and project review of light rail stations and redefine Transit-Oriented Development to include a civic animation component distinctive to Redmond.
• Look for public/private partnership opportunities to extend the reach of the arts in the community. Develop flexible, culturally-responsive partnership strategies that accommodate cultural differences.
• Create incentives through design guidelines and departures from zoning to include art in private development projects.
Evolving Character: The Look & Feel

Todd Jonnausch, Small Voids, Various Locations
NEAR TERM PROJECTS
BY 2022

- Activate downtown
- Implement LACE
- Weave art throughout the City
- Amend the public art ordinance

Civic investment incorporating art and arts activities is heavily focused on building and enlivening the gathering spaces in the downtown core. Projects include the downtown park, City Hall lawn and the Connector. The City has involved artists as thinkers, makers, and producers by engaging them directly with city departments and “at-large” within the city. As a result of these efforts, and using LACE (Leading with Art and Cultural Engagement) criteria, art is beginning to be embedded in the city infrastructure and fabric - becoming an increasingly important element defining Redmond’s character and community life. Temporary/ephemeral/performance arts activities throughout the City are generating a lively, eccentric, appealing civic environment with serendipitous opportunities for engagement and conversation. Redmond has begun exploring how to incorporate art into the Innovation Partnership Zone. The regional arts community is taking notice of Redmond as a place to work creatively.

MEDIUM TERM PROJECTS
BY 2026

- Activate Overlake
- Continue using and refine LACE
- Continue building on downtown programming
- Two strong nodes of creative goings-on in place

Development focus is on the evolving community of Overlake. Artists are involved in numerous design teams focused on developing a richly layered physical, built environment. Downtown Redmond is humming along as a lively community hub, one that draws people to creative activities and businesses. Artists’ creative input is infusing the street grid, parks, the urban pathway, and intersections with a fine-grained aesthetic that is giving a lively, genuine character to the neighborhood. Ephemeral/performance arts have expanded to include activities that are unique to Overlake, complementing downtown Redmond. Two strong nodes of creative goings-on are now in place. The dedicated downtown arts space has been built and is full of life. The regional arts community is enthusiastically engaged with opportunities throughout Redmond and views this as an important place to interact with. The local work force and further-a-field regional community is visiting Redmond to share in the lively civic environment.

The following narrative describes how implementation of this Plan could impact the City at benchmark time periods. It imagines the progressive interweaving of art in placemaking, the promoting of artists thinking and creative works, and the enlivening of Redmond’s quality of life. The descriptions illustrate how the new approach to public art – both programmatic and in generating engaging creative artworks – creates a sense of destination through establishing vibrant urban centers that entice the community to gather and support businesses while building community.
LONG TERM PROJECTS
BY 2030

• Activate SE Redmond
• LACE is part of Redmond’s culture
• Cultural programming is infused throughout City

The breadth of what Redmond is known for regionally has dramatically expanded. Redmond is to a great extent defined by its dynamic community-based, ingrained, diverse cultural language and creative activity – regularly drawing visitors from throughout the region. The broader regional and local artists are consistently engaged, as Redmond has become a place to stretch creatively and be part of a lively scene. The City is known for its exceptional public art program that supports a true connection of creative activity to building a strong, involved and engaged multi-generational community. City departments have mastered the use of LACE as a cultural lens to look at all city activity to invest with artists’ thinking and artwork. The City is steadfastly involved in creating collaborative opportunities between the arts, community, and business that make Redmond a place with a distinctive character and sense of place that is constantly, and conscientiously, enriched. SE Redmond is developing along with the light rail that will link three primary nodes in Redmond.

Color Festival, Redmond, WA
VIBRANT CITY: ART IS INTRINSIC

Jeppe Hein, Mirror Labyrinth, NY, NY
VISION

Redmond is a dynamic city where art is intrinsic to its vibrancy and character. It nurtures an ever-changing mosaic of contemporary cultural expression, using art as a hinge to link people to their city and to each other, creating a truly sustainable, soulful, and imaginative community. The thinking and engagement of artists is key to the realization of this vision.

MISSION

Redmond weaves art throughout the physical and social fabric to connect people to the city and to each other. It embraces innovation, cultural fluency and environmental stewardship as artistic touchstones.

The City embraces the idea that innovation and creative expression nurture and sustains community. Using a broad lens of ingenuity, cultural equity and sustainability, art illuminates cultural, environmental and civic values. The result is a city defined by its engagement of artists as thinkers, interpreters and provocateurs. This holistic approach is the result of visionary leadership and commitment by the government, in partnership with the private sector, an engaged citizenry, and inspiring artists and their work.

VALUES

Demonstrate care for the voices of our international and multicultural community.

Present a breadth of contemporary art practice that expresses ingenuity, creativity, innovation, and collaboration.

Prioritize an equitable distribution of projects that balances local accessibility and regional impact.

Nurture depth, breadth, and diversity in the community fabric.

Recognize the unique value artists bring the community by providing generous support and compensation for their work.

Spark community transformation that is multidimensional.

Activate the City with art and arts activity in the public realm.

GOALS

Promote a walkable culture where people can explore idiosyncratic places and activities.

Create platforms that transcend function to support community gathering, special events and eccentric gestures.

Engage people in a sweet relationship, quiet and intimate, with the City.

Create an exceptional public realm that distinguishes Redmond in the region as a place of innovation and creative energy.

Express natural systems and infrastructure through artworks that promote experiential understanding.

Create an 18-hour day downtown through art integration and activities.
QUALITIES

These concentrated statements describe the many ways that art and artists advance Redmond as a layered and complex city with a keen sense of place. These are the kinds of qualities that we would be looking for in public art projects referencing Themes and Platforms that are initiated and supported by the City.

Art has a courageous vision
Handing artists especially challenging, meaningful opportunities to participate in transforming the city and its community inspires profound, reflective, insightful thinking.

Art transforms spaces into places
Routine commercial development and standard streetscape designs are often formulaic, lacking vitality and particularity. People are drawn to communities where design enriches its character. Integrating art and artistic activity from the beginning of planning and continuing into design and implementation enhances that particularity – and converts mere spaces into “places”.

Art creates a bridge between cultures
Artistic activity can put into play engaging concepts and actions that act as magnets, drawing diverse people into contact physically, intellectually, and emotionally – establishing environments for exchange and understanding.
Art encourages civic engagement

The art form currently known as “social practice” is predicated on the idea that art is interactive and that through many forms of engagement, experiences are more diverse and thinking shifts and grows in multiple directions. Doing becomes believing. Creative activities sponsored by the City encourage people to form an enduring personal relationship with the civic structure. Once “your City is known” there is more desire to engage.

Art invites participation in informal venues

Placing art and artistic activity in nontraditional settings can generate something that is simultaneously approachable, yet somewhat edgy and/or outside the norm. Art becomes part of all facets of the public realm and in effect, part of people’s everyday life in their city.

Art is collaborative

There is energy in taking the approach that artistic activity is something done in partnership, therefore, shared. For example, collaboration can be between artists of the same or different disciplines; between artists, architects, landscape architects and engineers; between artists and scientists or technologists; or, between artists and community members. These dynamic relationships potentially have no limits and can reap rich results.

Art is inter-generational

Art has the powerful ability to engage people across generational lines. Redmond’s demographic includes multi-generational families, singles, and kids of every age.
Art has multiple platforms

By establishing an approach that art activity will be of multiple scales, media, locations, timeframes, etc. the potential for engagement and impact is exponentially increased.

Art can be interdisciplinary

Working with different disciplines is an inherently interesting methodology with surprising potential. Many artists, today, are crossing boundaries, often, no longer specializing in one media or even one discipline.

Art is process-oriented

When art activity is expressed as a process rather than a product, there is more of a sense of the ongoing dynamics of both change and stasis. The sense of sharing experiences, pleasure, memories, exchanges, and more equals a shared life. This enhances the community’s sense of who it is.

Art is idiosyncratic

Art, by its nature, is experimental and unpredictable. It can challenge convention, cross boundaries or point out in unique ways what is comfortable and common. The power of exposure to artistic activity is that it can pull people out of their typical frames of reference and understanding by laying out eccentric paths.
Art recognizes new possibilities in materials

Looking broadly at what can be transformed by thoughtful creative intention is very potent. Coupled with considerations of sustainable reuse and variable approaches to production convey an ethic that becomes identified with the City’s priorities and its civic identity.

Art runs the gamut of analog to digital

The spectrum between the diametric opposition of these two is vast, allowing constant explorations, discoveries, and questioning. Artistic activity can mine the territory, lead forays into it, pose questions, experiment, etc. All of this is beneficial to the well-being of a community as it tries to find a balance in the every-changing world in which we live.

Art nurtures enduring communities

Art in the public realm builds experiences that are associated with the City as a place and the City as a group of people. When people connect to both place and to one another, an ethic of care is developed that tends to be deep and enduring.

Top: Jaume Plensa, 1004 Portraits, Chicago, IL
Middle: Group Laps, Lyon, FR
Bottom: Carolyn Law, Where We Are Now, Burien, WA
THEMES

These themes are intended to provoke and inspire numerous responses by artists engaged to work in and with the city’s social, built and natural environs and with the community through Redmond’s Public Art Program. They are intentionally expansive, yet specific to the conditions of Redmond. They are conceptual springboards, starting points, and/or backdrops for exploration of the City and artistic responses.

REDMOND: INTERTWINING SYSTEMS

“Intertwining Systems” references the natural environment and built infrastructure which form a complex and dynamic web. The natural landscape, including the open space network of trails and parks, the Sammamish River, and hilly topography define the physical City. The infrastructure for storm water, wastewater, other utilities, the bus system and soon-to-be light rail, all impact the City’s built environment while intertwining with natural systems. Roadways, trails and bike infrastructure link the natural and built environments. Waste removal, recycling, electrical distribution are also part of the web. Artists are effective in illuminating infrastructure as well as finding innovative ways to engage the community in understanding the “complete” world of which we are a part. Addressing ecology and sustainable environmental practices are also threads. Art can help people understand the climate change and cultivate stewardship of our shared environment.

REDMOND: MOSAIC HYBRID

“Mosaic Hybrid” references the unique qualities of Redmond as a multidimensional community that is linked through cultural, economic, and institutional ties within the City, across the region, and the world. Contemporary artistic expression that is grounded in and informed by diverse cultures can play an important role in building intentional bridges between people of different backgrounds. It can also advance concepts of cultural and social equity so that people have a shared sense of belonging.
REDMOND: INTELLECTUAL PLAYGROUND

“Intellectual Playground” references the role of innovation and experimentation that defines Redmond as an international leader in technological explorations and achievements. Home to a wide variety of established corporations and start-ups, the culture of technology values “disruptive”, and by extension, creative behavior. From Studio 99 at Microsoft to Digipen to the startup in a garage behind a house on Education Hill, these resourceful experimenters are looking at new ways to work and play. Redmond has an opportunity to make the wired world increasingly part of the public realm in a meaningfully playful and interactive way. Artists working with technology often conceive of different applications or ways of working than what might have been the original intention. They often find new or unexpected ways of engaging with technology and involving the public.

REDMOND: POWER OF PLACE

“Power of Place” references the importance of connection to places, and through that a sense of belonging. All people seek out special places where they can share experiences, find comfort in the everyday, celebrate important events, or honor civic or cultural heritage. These places are considered special and become natural attractions.

But, these places do not happen without care and forethought in their planning or without vigilance in their programming and stewardship. Involving artists in the planning, development, and implementation contributes to making a place special. Redmond has already identified the potential of embedding artists in planning and implementation of core projects such as the Downtown Park, the Cleveland Street Downtown Art Plan, and the Connector Trail. As Redmond continues to develop, especially in the Overlake and Northeast neighborhoods, it has the opportunity to continue to consciously embed artists in project development.

Through boldly adding art and art activity, the City will create vibrant places, both large and intimate. Beyond contributing essential distinctiveness, artists can help create interesting platforms for a spectrum of other creative actions, as well as more typical activities like festivals and farmers markets.

Jim Sanborn, Caloosahatchee Manuscripts, Fort Lee, FL

Norman Foster, Mirror Pavilion, Marseille, FR
PLAT FORMS

The forms of public art are as diverse as the artists undertaking it. Creating an array of opportunities will enrich the City in an ongoing and evolutionary way. Types of City-initiated projects are described below.

To bring about a truly innovative public art program requires that the Public Art staff be included as full participants with other City department staff at the table at the earliest capital and conceptual planning efforts. This will help ensure effective, consequential artist involvement as projects develop.

Collaborative Teams

Collaborative Teams include: artists serving on design teams for planning or designing a City park, streetscape, or civic building; interdisciplinary artist teams developing cross-disciplinary works; a team of artists and non-artists (from scientists to chefs); or two or more artists of the same discipline working on a project. Collaboration enhances the potential to think “outside the box” in direct relationship to the City.

Signatures

The concept of “Signatures” carries with it the intention of commissioning art that becomes essential to the community’s identity. The term signature artwork does not necessarily imply large scale, nor any particular form or material. Small gestures can be as powerful as large ones. Something more hidden away can have a compelling allure, while another can be forthright and center. There is no formula for what these artworks might or should be but they should be resonant particularly for Redmond. What is important is the artworks become integral to people’s sense of their City while simultaneously creating a broader identity outside it – becoming part of what the City is known for. Success of the artworks could be noted by the fact that residents want to go by and check in and regularly take visitors to see them. In some cases, they can, in and of themselves, become gathering places or serve as platforms for art activities.

Top: Ellen Sollod, Sentinel & Archimedian Seats, Bellingham, WA
Bottom: Daan Roosgaarde, Netherlands
**Pedestrian experience**

Pedestrian experience refers to those small-scale, intimate artworks that add fine grain detail and particularity to an everyday experience. They can be one-offs that contribute to the spirit of the street, perhaps inviting interaction, or sequential works that are seemingly functional like utility covers that add aesthetic spice.

**Artist-in-Residence**

Artist-in-Residence programs can range from artists embedded in City agencies to a visiting artist working in-residence at the pottery studio or a recreation center to artists staging projects in City parks for a certain duration to artists undertaking social practice projects in which they work in a vacant storefront. The goal is for there to be a sense of unbounded creative infusions into the character and experience of the city. These residencies should be of some duration and continuity so that there is an opportunity for meaningful community engagement.

Top: Nanda D’Agostino, *Festival of Flowers*, Portland, OR  
Middle: Andrea Bowers, *Project Row Houses*, Houston, TX  
Bottom: Gloria Lamson, *Untitled*, Port Angeles, WA
Temporary/Ephemeral

Temporary/Ephemeral projects are about civic animation and engagement. By having a duration, they are able to have a more flexible and open approach than permanent artworks. They can take a wide range of forms as well as timeframes—a day, a season, or longer. They can be purposefully targeted, calling attention to something upcoming, celebrating a community event, in the parlance of “tactical urbanism,” they can be a way to experiment with a changing use or test ideas. As examples, some cities have used “parklets” and “PARK(ing) Day” as ways to engage the community in envisioning new uses of public right of way. Or temporary projects can highlight infrastructure or natural phenomenon and be designed to disappear by entropy over time such as the Blue Trees project or the ever-popular “yarn bombing.”

Process/Performance-based

The public realm provides opportunities for people to meet and be exposed to a variety of neighbors and ideas. These meetings often take place by chance, but process/performance-based public art projects have the capacity to stimulate interaction among people through deliberate creative acts. These projects can instill pride, belonging, interaction, and human connection among people. Depending on the scale, they have the capacity to bring unprecedented numbers of people together to share a profound experience. They can occur once or become part of an on-going art event identified with the City. These projects can involve a few or numerous participants, volunteers and supporters who become participants in the process of creating, shepherding, and staging them. On the other hand, these kinds of projects can be more intimate, taking the form of social action in which a temporary site is used for a sequential event or art buskers who perform regularly at farmer’s markets or other gathering places.

Interactive Technology

As technology develops, our everyday experiences are increasingly mediated, and many activities that used to be solitary are now interactive. While interactivity is often overplayed, advances in technology, both hardware and software, have opened up the potential of interactive technology-based art installations. These can engage people in a new and evolving forms of connectedness. New media public art uses a vast range of tools, typically of an electronic nature and often involve audience-activated artwork. There are no limits to what this platform can be since implicit is a state of constant change. It is important to consider the framework of these projects – why, how, what – and to understand how they are positioned to ground and truly connect people to a place and time.

LEADING WITH ART AND CULTURAL ENGAGEMENT

Lang/Baumann, Verocin, Switzerland
IMPLEMENTING LACE

Integrate planning for art through the CIS, by involving key staff in identifying and prioritizing projects.

Integrate the LACE process into the City’s Capital Investment Strategy (CIS). The City of Redmond operates on a biennial budget cycle. The CIS brings together an interdepartmental team in the off-budget years to prioritize projects for the Capital Improvement Program (CIP). This would take the form of a two-stage process: the first using the CIS to determine which capital projects should include public art and which platform the art should be. The CIS process would identify which CIP projects should include art and what the allocation of funds should be. This would allow for the pooling of funds generated from all CIP projects. The second stage would be the actual allocation of funds at the beginning of the Phase Gate process for individual projects.

Art projects that are permanent in nature or are focused on the development of a particular site, facility or transportation corridor would be evaluated largely relative to their role in the public realm. Art projects that are not closely tied to a particular capital project such as temporary, ephemeral, process and performance-based projects or artists in residence, would be evaluated for their potential for contributing to the program goals. Multiyear programming will allow the City to systematically build the Public Art Program and increase public engagement.

Specific criteria for establishing priorities and platforms are outlined below for capital and non capital art projects. These criteria can be used to establish priorities for program growth and development and to articulate direction for the three timeframes, 2016-2022, 2022-2026, and 2026-2030.
CRITERIA FOR CAPITAL PROJECTS

The interdepartmental staff team would rank these items on a scale of 1 to 5 with 1 being low and 5 high. If done individually, the results are discussed interdepartmentally to come to a consensus about project potential. If a project ranks from 3-5 on any one item, it should be included in discussion. How effectively a project might advance the stated goals of the Public Art Program should be a part of the discussion. Additional priorities such as geographic dispersal, cultural equity and opportunities for innovation or partnerships would be weighed after the first assessment is made.

1. Does the project have prominence in the public realm? Identify the type of project, below.
   - Right of Way Projects: Is the project at an important intersection, along an arterial, or at a critical node, pedestrian or vehicular bridge?
   - Civic Buildings: Is the project a new or to-be-renovated/expanded civic facility for public use such as a community center, swimming pool, arts center, park pavilion, etc?
   - Parks/Open Space: Is the project a new or expanded trail, park or publicly accessible open space?
   - Infrastructure: Is the project part of the City’s infrastructure system with a public face?
   - Urban Center: Is the project in a priority target area, i.e. Downtown, Overlake, Northeast

2. Is there an opportunity for an artist to contribute to the design/planning/conceptual thinking of the project so that art is embedded across disciplines?

3. Does the site have the potential to serve as a platform for art, cultural or community programming?

4. Are there opportunities for pedestrian and/or community interaction/engagement?

Is there an experiential opportunity that could expand community understanding of public infrastructure or natural systems.

5. Is there a unique opportunity to explore/express community/cultural values?

Once it is determined that the project has high potential for contributing to the vision, the capital opportunity would be assessed by the Arts Staff and a ballpark budget allocation for art would be determined in collaboration with the project team based on the scope, scale and public prominence. Funds from the pooled Public Art Fund would be allocated and an artist(s) would be selected. The thematic approach for the art would be determined in collaboration with the selected artist(s). If it is determined that an artist should be added to a design team, the funds for the artist’s fee should be calculated as part of the design team fee and should come from funds allocated for design. The artist could either be contracted directly by the City or subcontracted as a member of the team.

Project types generated through this process would be primarily permanent artworks and likely be the following platforms:
   - Artist(s)-in-Residence/Collaborative (Design) Teams
   - Signatures
   - Pedestrian Experience
   - Interactive Technology
CRITERIA FOR NONCAPITAL PROJECTS

This would be an evaluation of projects separate from the CIP. Funds for implementation would be allocated from the Art Activity Fund. The first step would be to articulate how the project will foster the achievement of the stated program goals and to identify which theme or themes it could address. Second, would be to evaluate it in terms of the following LACE criteria:

1. Are there significant opportunities for pedestrian and/or community interaction/engagement?

2. Is there an experiential opportunity that could expand community understanding of public infrastructure or natural systems.

3. Is there a unique opportunity to explore/express community/cultural values?

They would also be evaluated based on their potential in the following areas:

- The potential for significant visual or cultural impact to bring attention to a place/issue/idea for a particular, specified period of time.

- The potential to reach a targeted audience.

- The potential to encourage deep community engagement or to engage underserved audiences.

- Whether it presents an opportunity to test an idea such as experimenting with a changing use of a particular piece of property or to celebrate the coming of a new use or facility.

- Whether it facilitates a City partnership with a non-profit organization or corporation.

Funds for these projects would be allocated based on the development of a detailed project budget that includes outreach and marketing activities.

Project types generated through this process would be primarily projects of short term duration and likely be the following platforms:

- Artist(s)-in-Residence
- Temporary/Ephemeral
- Process/Performance-based
- Interactive Technology
IMPLEMENTING LACE: CAPITAL PROJECTS

ALL CAPITAL PROJECTS GENERATE PERCENT FOR ART FUNDS. SET PRIORITIES THIS WAY.

The project has prominence in the public realm?

YES

NO

Pool the money in the Public Art Fund

ROW Civic Building Park/Open Space Infrastructure Urban Center

Does the project rank 3 or above for potential public impact?

YES

NO

Pool the money in the Public Art Fund

Is there an opportunity for an artist on the design team?

Collaborative Team Platform

Signature or Site Integrated Platform

Pedestrian Experience Platform

Artist-in-Residence &/or Interactive Technology Platform

Civic Artist-in-Residence &/or Signature or/& Interactive Technology
This detailed narrative describes a potential mix of projects that can be selected for the upcoming 6-year period. In subsequent years, Redmond will make decisions for all future projects based on the LACE criteria and an evaluation of previous projects.

The tables included in the Appendix outline projects for the period 2016-2030.

**DOWNTOWN PARK PAVILION**

Defines the gathering space and acts as a multi-use component contributing to park’s identity, acting as a platform, and available for use in general programming.

This signature project would define this vital gathering space and act as a dynamic multi-use component that contributes to the park’s identity, provides a significant platform for changing creative expressions (both planned and spontaneous), and serves as a central location that can be generally programmed by the city.

**DOWNTOWN PARK PROCESS**

Activates the site through a series of temporary installations and/or performative works over the construction period.

Intentionally activating the downtown park site during the construction period through a series of creative activities will generate a sense of anticipation and growing awareness of this important central park in the community. For example, the construction fencing will be a significant visual factor in the downtown for several years. Using it as one of the platforms shifts it from being a barrier to activity to being a vibrant factor. Other creative activities could initiate on-going awareness and involvement within the community as well.

**MOVING ART CENTER**

Activates the downtown park construction site and other selected sites throughout the City through varied programming of the mobile center.

Programming the Moving Art Center and placing it in and around the downtown park site adds another way to alert the community to the transformation of the downtown. This activity would also generate excitement about the new park and its potential to energize the downtown. Programming should intentionally target different audience demographics and be regular enough to become something that the community looks forward to. The programming should explore a full creative spectrum of activity – performance, music, creative food, installation events, etc.
CITY HALL ARTWORK

Strengthens the “sense of place” and interactive potential for all ages on City Hall lawn

The city hall lawn is a significant gathering location for community. Strengthening this area through the addition of a signature artwork that further activates and defines this location will elevate it to a status of a partner location to the downtown park. The artwork should become a dynamic and key component of the site, as well as be very particular to Redmond. Ideally the artwork should also have the potential to draw people off the Lake Sammamish trail to take a look – adding regional impact.

CIVIC ARTIST-IN-RESIDENCE

Provides on-going creative input to & dialog with staff as the new public art plan unfolds

It is crucial to involve a resident artist to work with staff to further cultural dialog and broaden the thinking about place-making associated with general city and Overlake development. This civic artist-in-resident would help articulate and identify art opportunities in City infrastructure and other improvements. The resident artist would be familiar with LACE and assist in applying it across departments. If desirable, this artist could undertake temporary projects that explore ideas generated through discussions with staff during the residency.

LACE PROJECTS

Determines public art projects tied to CIP and Planning projects through the use of LACE framework

City staff would determine which projects should have public art associated with them through the application of LACE. Over time, all departments would become familiar with using cultural criteria as part of the typical evaluation along with other relevant criteria, when thinking and planning Redmond’s build environment.

DESIGN TEAM PROJECTS

Engages artists in a collaborative process related to planning and CIP projects

Identifying opportunities and advocating for the inclusion of artists on consultant teams undertaking planning and design projects should become a staple of how Redmond does business. Clarifying what advantages this has for the quality of the built environment is important in order to embed this approach into the fabric of how departments write RFQ’s for projects.

OVERLAKE PUBLIC PROJECTS

Engages artists in all public components projects of the Overlake development process

Overlake is an amazing opportunity that should not be missed for Redmond to be aggressively forward thinking in achieving a dynamic aesthetic character and sense of place in this new part of the city. In order to achieve this, artists should be members of each design team from the very beginning of each project - 152nd Street, North Village Park, the urban pathway, and the light rail station plaza area.

John Fleming, Erratic, Redmond, WA
**EXPANDED REDMOND LIGHTS**

Elevates Redmond Lights to a “signature” event for both community and region

Expanding the current Redmond Lights to a larger, and perhaps longer event, could elevate it to a regional event that generates greater interest and participation of regional artists, as well as visits from the regional community. This event could be programmed through a call to artists or through contracting an independent curator.

**ARTIST-IN-RESIDENCIES**

Generates a wide variety of engaging art activity with an annual 1-3 month residency

The city would determine an area of the city to focus on for each residency. The artist-in-residence would result in creative community exchange through temporary and/or performance-based artworks that are surprising and enlivening. As the impact of a residency is evaluated and understood, the residency concept could be refined.

**ANNUAL TEMPORARY INSTALLATION EVENT**

Encourages active exploration by community of various areas of the city through an annual event placing artwork in diverse selected environments

A curated event engaging the larger artist community, community and region in a “signature” experience

Creating a special annual event that highlights particular areas of the city such as the Green Loop, the NE Corridor, downtown, or the connector could become a signature event for the city. This type of event would generate interest in the larger artist community bringing an exciting array of art expressions to the city each year. This event could be a seasonal complement to Redmond Lights.

**MEDIA @ CITY HALL**

Activates the lobby of this important civic space and highlights the technology work that so characterizes the city

Showcasing media pieces provides a direct link to this important characteristic of the Redmond community. This simple format takes advantage of existing infrastructure in City Hall and importantly, activates the lobby, while underscoring who Redmond is.

**“REDMOND LIVE” APP**

Expanding the reach of the City’s cultural activities while providing a shared cultural language to Redmond’s diverse citizens

Redmond could be on the forefront of developing an engaging, interactive app that showcases the cultural activities presented by the City for the local community. If successful, this app would bring more people out to partake in the wide range of events and deepen the experiences. It would be up to the talent in Redmond to take this idea and run with it. This activity might be one that is updated every so often to take advantage of new technology thinking and greater understanding of how digital exchange contributes to building a stronger sense of community. Additionally, the app should be a tool that knits together the three nodes that will come to characterize the community (Downtown, Overlake and SE). Finally it should also expand the impact of the City’s cultural life to the wider region by establishing a sense of Redmond’s unique character.

*Yen Minjun, A-Mazing Laughter, Vancouver, BC*
A FLEXIBLE AND RESPONSIVE REDMOND
The City is now strategically positioned to exert a leadership role with respect to art in the public realm in Redmond.

Over the last several years, the City has shifted its approach from passive art collection to projects that embrace active art engagement and contemporary art practices. The City has increasingly involved artists in the planning and design of critical pieces of infrastructure and community amenities.

Artists were included in the design teams for the Downtown Cultural Corridor, the Central Connector and the Downtown Park. Their involvement resulted in art integration in key elements of the public realm and recommendations for engaging artists with community members in ways that encourage participation. It has also resulted in projects that reflect the thinking of artists in planning and project development. In addition to fostering specific artwork commissions, these artists have influenced overall design strategies. The catenary lighting on Cleveland Street is one example.

Each of these art plans identifies a wide variety of permanent and temporary art projects that speak to Redmond as a unique community in the region and encourage Redmond to capitalize on its position as an innovator and a locale with rich natural resources.

The City should adopt a policy of engaging the arts as a key element in creative place-making.

Involvement of artists in the planning of these important projects was the result of City staff determining that this was important to the success of these efforts. No formal policy exists to ensure that this happens in the future; yet, the benefits have been clearly demonstrated. There are advantages to making this a formal City policy so that artist engagement yields the most expansive and best results.

The City should continue to take the initiative to produce and present community-wide festivals and events that increasingly engage broad participation.

The City has also sponsored and produced a variety of cultural events ranging from Redmond Lights to Lucia Neare’s Theatrical Wonders and So Bazaar. These events encourage community engagement and, in some cases, have utilized public art as the platform in which they happen. Combining permanent public art sites with temporary events has an added advantage of involving the community members as active participants in art creation.
The City models excellence in its own work and positions itself to “raise the bar” with respect to private development.

Redmond is rapidly developing as the private sector constructs mid-rise housing and ground floor commercial space downtown and as the high tech industry grows. Plans for Overlake Village and transit-oriented development associated with the coming light rail stations will dramatically alter the face of Redmond. Planning for art and cultural integration in these projects and aspiring to design excellence will put the City ahead of the curve in defining its unique community character.

The Redmond Design Review Board reviews these projects; but, presently the DRB has no methods for specifically encouraging art integration. Developers are required to complete sidewalks when a project faces on it. The City can include amenity requirements for art in these projects. The City is also considering adopting design guidelines for the redevelopment in Old Town. These guidelines could include provisions for art integration.

A high City priority is to promote the quality of life in Redmond and civic leaders see the arts as integral to this. The City recognizes its increasing cultural and ethnic diversity as a strength, and values the rich cultural traditions these new residents bring. The City also understands the high cost of living is a barrier to artists being able to live and work locally. While it wishes to nurture its resident non-profit arts organizations, it understands that it also is necessary to engage regional or national artists to achieve the kind of environment it envisions.

ANALYSIS OF THE EXISTING PUBLIC ART ORDINANCE

The Ordinance, passed in 1991, draws a narrow definition of public art, restricting the allocation and use of funds.

The stated purpose of the Ordinance is to “create a variety of cultural opportunities for its citizens and to enhance the cultural environment in the community…”

At the same time, the Ordinance limits the definition to “public visual art.” This narrow definition of public art as “visual art” no longer corresponds to the wide array of art projects that are common in contemporary public art practice today.

In the public realm, artists create works that may be sculpture and traditional media such as drawing, prints and paintings but are equally likely to create site-integrated, sound, digital or other media, functional works, light-based, land forms, social practice, performative works, often blurring the boundaries between disciplines. This rich panoply of expressive forms contributes to civic animation and invites community engagement.

Restrictions in the qualifying capital improvement projects limit funds available and present obstacles to effective implementation of the program’s intent.

The Public Art Ordinance prohibits the application of the Percent for Art to transportation projects unless the street, sidewalk or parking lot is part of a building project. Streets, sidewalks and parking lots on their own are not eligible for the Percent for Art allocations.

The public right-of-way is now viewed as an important part of civic life. Streets, sidewalks and parking lots constitute the building blocks for civic engagement. The “Great Streets” concept views transportation infrastructure as places for people, and as such, it should have a cross-over character that enables streets and sidewalks to serve different functions over time; and, they are designed in such a way that they enhance the public realm. Transportation functions, themselves, now extend beyond motorized vehicles to bicycles, pedestrians, festival streets, and shared uses. Expeditious flow of cars, trucks and transit is balanced with the role of the street as a key piece in defining the character of a community.
A strength of the ordinance is that funds may be pooled and the Arts Commission has discretion to allocate funds for projects which further the purposes of the Ordinance. Funds, not expended in one year, roll over to the next and are not lost to the program.

Both of these factors enable the Arts Commission to prioritize the use of Percent for Art Funds based on project priorities rather than the fiscal calendar.

The Percent for Art has been treated as a “deduct” from capital project budgets rather than an addition, resulting in some departments being reluctant to participate in the program.

It was stated that some departments are reluctant to participate in the program because they feel that it takes away resources for necessary features of a capital project. This may mean that some projects that could well benefit from the inclusion of art do not. The Percent for Art is treated more often as “ceiling” rather than a “floor;” consequently, the funds generated by an individual project are often not enough to be meaningful. Because it is associated with the CIP and not the planning that preceded CIP development, the funds sometimes come too late for effective art inclusion.

The Arts Commission is not always fully informed of upcoming capital projects, resulting in missed opportunities.

At the same time, there is a need to refine the approach to funding public art to ensure there is a codified mechanism and adopted policy that ensures allocation of funds for public art and that it not become a voluntary program.

Finally, there is support for developing policy that results in assessing projects at the beginning of planning to ensure that goals and budgeting for art and cultural equity are included at an appropriate amount.

The City has expressed a desire to consider additional funding sources for public art. Percent for Art continues to be the backbone of public art programs throughout the country. The ordinance can be modified to make it a more effective and flexible source while advancing the purposes of the program. Additional funding strategies are discussed in Appendix ___.

PUBLIC ART ORDINANCE RECOMMENDATIONS

REVISE THE ORDINANCE TO SUPPORT THE NEW MASTER PLAN

Retain Percent for Art as a dedicated funding source and consider raising the amount to 1.5%.

Section 1 Purpose. Revise this language to expand the definition of art and the potential uses of art in the City. Consider the following language: A policy is established to pool 1.5% for the arts funds to be used to include the works and thinking of artists to enrich the lives of City residents through increased opportunities to interact with art, to engage artists in the planning, design and construction of facilities, buildings, infrastructure and public spaces to enhance the physical environment and to use art to mitigate the impacts of City construction projects. This language expands the definition of art and the potential uses of art in the city.

Section 2. E. Revise Qualifying Capital Improvement Project to include all right-of-way and transportation infrastructure projects as well as trails and utility facilities such as pump stations.

Section 4. Method of Calculation. Clarify that the Percent for Art shall be added to the capital costs. In calculating capital project budgets, the construction costs should be determined and the Percent for Art allocation should be added to the capital costs to arrive at a total capital budget. The basic principal of public art is that the City is enhancing projects to improve the public realm. Treating these funds as a deduction potentially negatively impacts City projects as it requires agencies to reduce the project budget by the funds allocated for art. In other words, to calculate the CIP, the construction costs for projects are totaled and the Percent for Art is added to that total. The total Percent for Art becomes the Art Activity Fund and funds are allocated on a project basis relative to the stated goals of the Public Art Program.

As an example, King County requires that at a minimum, the amount budgeted for public art in a capital project budgeting process is 1.5% of the construction costs. This ensures that public art is an integral part of the planning and design process and that the arts are considered from the outset.

The City has expressed a desire to consider additional funding sources for public art. Percent for Art continues to be the backbone of public art programs throughout the country. The ordinance can be modified to make it a more effective and flexible source while advancing the purposes of the program. Additional funding strategies are discussed in Appendix ___.

REDMOND PUBLIC ART PLAN • ALIGNMENT
improvement project should be equal to one percent of the
following project elements: conceptual design, design,
contracted design, preliminary engineering, construction,
contingency, and project administration and construction
engineering. Costs associated with the predesign phase
of the county’s capital planning projects meeting the above
criteria and anticipated to result in construction, shall be
included in the calculation for public art.

This ensures that there are funds available for artists to be
included on design teams before a construction project is
begun. Since much of the important work happens in
the planning of projects, involving artists early is the only way
to ensure that opportunities are not missed for meaningful
art integration and for the thinking of artists to influence
design outcomes.

Provide for changes to the calculation in the event that
City Council amends the budget or provides supplemental
costs for the project in future years.

Retain the ability to pool funds and carry over fiscal
years.

Pooling affords the opportunity to look at
the needs of the City as a whole and use
the public art revenues only in those proj-
ects that may have the greatest impact on
the community or offer the best opportu-
nities for artist involvement.

Pooling on a departmental basis affords the opportunity
for the Redmond Arts Commission and City departments
to work collaboratively on projects that reflect the mis-
sions and goals of public art program and to ensure that
public art projects are adequately funded. It is not the
City’s intention that every capital improvement project that
contributes to the public art fund revenues shall include a
public art project.

To include adequate funds for project management and
administrative costs the Percent for Art should be in-
creased to 1.5% from the current 1%.

Section 5. Make sure that city projects involving the use of
General Obligation Bonds are identified as eligible which
may mean making sure that such language is included in
the bond definition.

Section 6. B. Evaluate moving maintenance costs out of
the Percent for Art allocation and aligning them with the
overall maintenance costs attributable to the City’s capital
maintenance budget.

Section 6A Revise the ordinance to allow for a broader
definition of art. Specifically, revise Section 6A to allow
for contemporary art practice that is not anticipated in the
current language as well as other additional uses.

- The selection, acquisition and display of works of art,
  that may be an integral part of the project or placed in, on
  or about the project or other public space;
- Artist fees, design, planning and predesign service
  contracts and commissions;
- Expenses for technical assistance provided by either
  architects or engineers, or both, and to artists in order to
  design, document or certify the artwork;
- Public art program administrative expenses relating
to acquiring, developing or maintaining public art to the
extent permissible under generally accepted accounting
principles, grants, contracts and law;
- Participation by citizens or costs of communicating with
  and receiving input from citizens, working with profes-
sional artists, introduction of public art to children, and
  education of the public about the City’s rich cultural and
  artistic heritage;
- Documentation and public education material for
  the public art program;
- Liability insurance for artists; and
- Artist-in-Residence or temporary art projects approved
  by the Redmond Arts Commission.
APPENDICES

• Alignment of Existing Plans
• Alternative Funding Strategies
• Programming Matrix 2016-2030

John Fleming and Susan Zocallo, Blades, Seattle, WA
Redmond has three recent master plans, each with a cultural component—the Downtown Cultural Corridor, Redmond Connector, and the Downtown Park. Each describes a similar vision for a vibrant, art-filled environment and a citizenry actively engaged in art. Each includes an emphasis on art that is interactive, durational as well as both permanent and temporary. They all see a clear role for illuminated artworks to add excitement and energy. The role of the artist as an active participant, directly engaged with the community, is a common value. Each articulates opportunities for signature artworks that are character-defining. And, each proposes a broad list of potential projects.

Between these lists, there are both overlaps, as well as some differences, in approach, proposed locations, and suggestions for cultural actions. Each is ambitious in scope and envisions a vast array of possibilities. None provide projected costs nor clearly articulate priorities.

**THE DOWNTOWN CULTURAL CORRIDOR PLAN** focuses more on how Redmond can create a dynamic, active downtown, filled with art and artists. It presents strategies for permanent works in the streetscape and describes methods of artist engagement through short-term storefront, temporary and performance-based works. The Plan identified gateways at the Redmond Way Trestle and the juncture of Cleveland Street and Redmond Way as opportunities for art. The Cultural Corridor Plan articulates strategies through 2016 that are intended to help build momentum downtown.

An outcome of the Plan to date is the Moving Art Center that the City is inaugurating in summer, 2015. The Plan encourages art projects during the construction phase of projects to bring art to the fore. Finally, the Plan touches on the role of art in the proposed Downtown Park as well as the Connector trail. The plans for these respective projects are generally consistent with the vision described in the Downtown Cultural Corridor Plan.

**THE CONNECTOR PLAN** describes a strategic approach where art is fully integrated into the experience of the trail system through a combination of site-specific and site-integrated work as well as using the Connector as a platform for artist and community engagement. It also proposes a variety of artist-designed street furnishings that could be used to link the trail together.

Three of the strongest public art projects that have recently been completed in Redmond resulted from having an artist work collaboratively with the Connector design team. These are the permanent signature artworks, Signals and The Erratic, and the temporary project, Sky Painting. While these were not specifically the result of the Connector Plan itself, they are unlikely to have occurred had an artist not been involved early in the process.

**THE DOWNTOWN PARK PLAN** similarly envisions art as a defining characteristic of the park and like Signals in the Connector, it sees the signature element in the park, the Pavilion, functioning both as a work of art as well as a platform on which art and special events may take place. Like the Downtown Plan, the Park plan articulates a role for art in helping to build momentum and community involvement through temporary and interactive projects. Like the other two plans, it sees a role for illuminated works both temporary and permanent. Like the Cultural Corridor plan, it encourages the City to take advantage of the construction phase by using construction fencing as a platform for art. It also recommends commissioning artists for strategic gateway projects. It describes a broad array of temporary projects throughout nearby parks, trails and streets. These represent engaging ideas but none are fully developed, include projected costs, or are prioritized.
ALIGNING THE PLANS THEMATICALLY

The Plans are consistent with the overall vision articulated in the Public Art Master Plan. The themes suggested all can be subsumed into one of the four overarching Master Plan Themes. For example, the Connector Plan approach fits within “Intertwining Systems”; the Downtown Park fits within “Power of Place” and “Intellectual Playground”; and, the Cultural Corridor responds to all four: “Intertwining Systems, Mosaic Hybrid, Intellectual Playground, and Power of Place.”

Aligning the plans thematically may simply mean shifting the nomenclature so that as Calls for Artists are developed, a consistent message is presented. There is no need to revise or change the plans themselves.

Prioritizing Projects

While much of the spirit presented in these plans is consistent with the vision and approach of the Public Art Master Plan, there needs to be a more strategic approach to implementation, one that more clearly articulates priorities. While it is helpful to have these various master plans, it is now time to step back and take a more global view to achieve a comprehensive program plan that effectively pushes Redmond to the forefront of how public art can markedly invigorate the public realm and the community, both locally and regionally.

For example, the types and locations of temporary art projects identified in the Downtown Park Master Plan are aligned with the new Art Master Plan framework but the list is not prioritized nor is there a clear linkage between them. The Downtown Park Master plan also calls for the creation of three major gateways in downtown, including City Hall, the Redmond Way Trestle and the juncture of Cleveland St and Redmond Way, while the Cultural Corridor Plan highlights only the latter two. The Central Connector mentions activities and artist spaces both along the Redmond Central Connector and similar spaces and activities are suggested in the Corridor. The Connector provides a great venue for short term and temporary projects that might occur in a festival format, lasting from one weekend to a summer.

Good examples to emulate are the artist-organized Nepo 5k Walk Don’t Run in Seattle and Port Angeles Fine Arts Center’s Art Outside. Other than Signals, no permanent venues are identified along the Connector. Sky Painting, located in a parking lot adjacent to the Connector provides an excellent temporary platform for special events, hosting the farmer’s market or the Movable Arts Center. In the future, the Cultural Corridor could host artists-in residence, a maker’s space or a pop-up social practice art space in a vacant storefront.

Inevitably, choices must be made among the many listed due to available funding and clear understanding of what the City is striving for in timely cultural engagement (as opposed to standard programming of public spaces which is mentioned in the Downtown Park plan for example).

It is important to keep in mind, that under the current master planning effort, the recommendation is that the hierarchy of all cultural efforts is directed first to downtown Redmond (which includes the Connector) and the developing Overlake area. These two primary centers are followed by the larger trail system, various infrastructure/systems, the future SE Redmond area associated with the coming light rail, and then the neighborhoods. Smaller neighborhood projects will thread art throughout the City.
ALIGNING AND PRIORITIZING PLAN IMPLEMENTATION

The 2016-2022 scenario described above was informed by an analysis of the three plans. This is a restatement of that scenario -- as viewed through the fresh lens of this Public Art Master Plan strategic framework and platforms.

Downtown Park
Give full attention to design and construction of the Downtown Park with an artwork that is a signature of the park and both defines this vital gathering space and acts as a dynamic multi-use component that can contribute to the park’s identity, act as a platform, as well as for general park programming.

The artist on the design team should be encouraged to pursue intense design development of the Pavilion and the Waterwall in close collaboration with the project architect, lighting, software and fountain designers to further the aesthetic and functional features of these very important elements. The team needs to develop a clear budget estimate that anticipates all construction costs.

The City should select an artist or group of artists to address construction fencing and temporary infrastructure leading up to and during park construction.

Downtown and Overlake Planning
While not envisioned by these plans, we believe that it is crucial to involve an artist to work with staff to further cultural dialog and broaden the thinking about place-making associated with downtown and Overlake development. Plans for Overlake are progressing and the longer it takes to get an artist involved, the greater the number of opportunities that will be lost. This civic artist-in-residence should help articulate and identify art opportunities in City transportation infrastructure or other improvements, especially as it relates to Overlake. If desirable, this artist might also undertake temporary projects that explore ideas generated through the residency. When an RFQ is released for any City projects related to Overlake, an artist should be included on the design team. This individual should be a fully vested member and should not be limited to identifying art opportunities. The City can either allow teams to select their own artist or develop a pre-approved roster from which the teams could select. Funding for these artists should be included in the consultant contract.

New Signature Project
The plans identified three significant gateways referenced above. The catenary lighting on Cleveland Street is already playing an important role in identifying downtown. While not an art project per se, it was developed as a result of the Downtown Cultural Corridor’s artist’s suggestion. It is important to evaluate the gateways identified and decide, based on the LACE criteria, which, if any, should be pursued. If not, using the LACE criteria and process, Identify a significant new Signature project to be undertaken during this period.

Artist(s)-in-Residence
Scope a select number of artist-in-residences that result in direct creative community engagement coupled with temporary visual art installations, social practice and/or performance-based artworks that are surprising and enlivening. To start immediately, the initial activities could take advantage of the mobile art center. For example, the mobile center could be moved around or stationed either at City Hall or in or near the Downtown Park site and have simple programming that might be tied to the Poet Laureate, an artist book exchange, interactive art activities, etc. Alternatively, the City could secure or work with One Redmond to secure a vacant storefront along Cleveland Street for this programming along with an information/display space on the new downtown park.
Expand Redmond Lights

The plans discuss lighting projects as significant opportunities for Redmond to distinguish itself. Continue Redmond Lights and expand the program in 2016 and beyond to commission 2-3 artists, annually, to create temporary lighted works. These could be somewhat modest in scale and budget, but taken together can have an impact. Include Signals as a platform during the festival and extending the lighting from one day a full weekend in 2016. In 2017, extend the lighting projects to a week with special events the opening and closing weekend. In subsequent years, consider extending the lighting aspects cover the holiday season through New Year’s Day. Include performers in Mobile Arts Center and a vaudevillian or juggler with torches, for example, and food trucks in the Sky Painting parking lot at the opening and closing of the festival and potentially, each weekend in between. Consider using a curator/artist producer to commission and manage these projects through a direct selection or invitational process.

A final 3-5 year budget must be carefully constructed to fit the limitations of available staff and existing funding.

Finally -- to provide clarity and coherency between the suggestions in the three plans in relation to the overarching Public Art Master Plan currently underway, the following framework helps to understand how the new Public Art Master Plan provides the strategic framework that allows all of the suggested projects in these plans to be prioritized going forward. The following outline is guided by the new comprehensive public art vision, mission, goals, values, platforms, etc.

Residencies

Generative Artist(s)-in-Residence

(Suggested in the Cultural Corridor and Downtown Park plans)

This provides a means to have artists be an actual presence in the downtown generating artwork, installations and/or directly engage with the community would be the intent of these residencies.

Depending on the outcome of the Cultural Facilities Master Plan, there may be a suggestion of using a storefront space. This could provide a place where an artist could work over a period of time implementing changing installations, structuring engaged creative activities that are housed in the space but may spill out into the community, etc. Alternately if a storefront is not in the picture, the mobile art center could provide such a space to work from and moved to various locations in the city.

CIP – Potential Signature Artworks

(Suggested in the Cultural Corridor and Downtown Park plans)

During early planning phases, City staff would use LACE to evaluate upcoming CIP projects to determine if they would be considered for a commissioned permanent public art project. A final decision of a project’s importance would also consider whether City staff determines a specific project significantly builds upon past cultural activities and projects in moving community building efforts forward through cultural activities. The gateways identified in the Cultural Corridor and Downtown Park plan may not or may not be high priority. While these intersections are important, the catenary lighting near the downtown park on Cleveland Street has a major presence. These other intersections are fairly nearby. It is unclear what additional streetscape features are planned for these intersections and there is limited right-of-way. Consequently, these locations require further evaluation to determine whether they are priorities.

Ephemeral and Performance Based

(Suggested in the Cultural Corridor and Downtown Park plans)

These projects are aimed at enlivening the public realm by drawing the community to the focus areas to participate or by finding unexpected delights. The projects should be scheduled to provide a constant infusion of enlivening, eccentric, unexpected events and occurrences that are joyful, provocative, and engaging. In some cases the community would be alerted to events and in others they would just happen upon them. City staff would determine areas of the city to focus on at any given time.

(Suggested in the Cultural Corridor, Downtown Park, and Connector plans)

Intentional, conceptually themed sets of projects of a specific duration could be curated and produced by a commissioned person or team. These events would be keyed to designated platforms in Redmond and themes outlined in the Public Art Master Plan. The City would determine the calendar for the events and potentially the physical area or civic system to be focused on as guided by the Master Plan and a City staff understanding of how the community is responding to cultural efforts undertaken by the City to progressively cultivate a vital community.
Partnerships
(Downtown Park Plan)

Exploring public/private partnerships with the technology industry and other local businesses to strengthen and expand the breadth and number of cultural possibilities. Nurturing a climate where the private sector sees the benefits of engaging in the city in this capacity will strengthen the cultural sector in multiple ways.

Yochai Matos, Flame
Establish a Non-Profit Organization to partner with the City.

To make it more competitive for grants, the City could establish a nonprofit foundation that can seek and receive private support to advance the work of the City’s art program. This is a strategy that has been successfully implemented elsewhere. While corporations, foundations, and individuals are often reluctant to make contributions to the government, they are often willing to do so when the recipient is a nonprofit organization. Funding sources such as the Kresge Foundation, Bullitt Foundation, Art Place and others have historically awarded funds for projects that are implemented by nonprofit producing partners. Similarly, the NEA Our Town Program makes grants to the designated local arts agency (LLA) in a jurisdiction. If the Redmond Arts Commission in not a designated LLA, it may be in its interest to pursue establishment of such an entity. This would be most useful for raising funds for special projects rather than an as ongoing funding source.

Engage the Private Sector in the City’s public art strategy.

The private sector is playing an increasing role in providing publicly-accessible, privately-owned public space as part of their projects. Developers are often responsible for meeting City requirements for adjacent street improvements. Beyond that, building facades, entries, and edges all affect the pedestrian environment. The City of Redmond is increasingly relying on the private sector as partners in creating pedestrian amenities. Future development in Overlake envisions developers constructing streets, sidewalks and open space. The private sector’s impact on the public’s experience of place is growing apace. Consequently, its role in placemaking is important to the vitality and livability of the City.

Redmond could encourage the integration of public art in private development either through voluntary programs whereby a developer would engage a professional arts consultant to identify an artist to work with the design team or create a site-specific work. If a developer were interested, they could contribute funds to the City’s Public Art Program which would allow the City to prioritize and commission appropriate art projects to enhance the public realm. Redmond could promote such inclusions through the development of design guidelines that encourage art integration in the public realm or through bonus programs that would allow greater FAR, for example. Some cities include arts spaces as well as public art as eligible within these guidelines.

A number of small cities such as Burbank, Santa Monica, and Emeryville, CA and mid-size and larger cities have mandatory percent for art requirements or use impact fees to support public art. These fees are sometimes triggered by projects of a certain size or ones in redevelopment zones.

As developers integrate art, they often find that it provides a quality that makes their projects more desirable to prospective commercial or residential tenants. Including art can contribute to a sense of community pride, provide aesthetic distinction and particularity, texture and fine grain detail.

Redmond should pursue development of a private sector public art strategy to ensure a dynamic and engaging environment. This is best undertaken in conversation with developers about how to genuinely advance shared goals for attracting and retaining residents and workers.

### TEMPORARY PROJECTS

Prior to the completion of 10 years of Public Art Programming, these projects should be evaluated, re-invigorated and/or re-imagined to ensure they respond to the current community conditions, needs and interests. They could be continued, revised or replaced at that time.
